[57] **ABSTRACT**

A clipper blade for use in a blade assembly of a hair clipper, the blade assembly having a fixed blade and a moving blade reciprocating relative to the fixed blade, the clipper blade includes a web portion having a first edge, and a second edge, a plurality of teeth on at least one of the first and second edges, at least one blade assembly engagement formation being located on the web portion closer to one of the first and second edges than the other of the edges, so that when a pair of blades each having the web portion and the at least one engagement formation are inserted into the blade assembly in reversed opposing relationship to each other, one blade of the pair being the fixed blade edge and having a plurality of teeth on the first edge, and the other blade of the pair being the moving blade and having a plurality of teeth on the second edge, the moving blade is laterally offset relative to the fixed blade.
